3<sup>rd</sup> PARTY VERIFIED

**EPD**

---

VERIFIED ENVIRONMENTAL PRODUCT DECLARATION | ISO 14025 & EN 15804

**Owner of declaration**

Træ.dk c/o Træ- og Møbelindustrien  
H.C. Andersens Boulevard 18,  
1553 København V  
VAT no. 13513104

**Programme operator**

Danish Technological Institute  
www.dti.dk

**Programme**

EPD Danmark  
www.epddanmark.dk

**Declared products**

Planned construction wood products of pine and spruce.

**Production site**

Multiple production sites throughout Sweden, Norway and Finland.

**Products use**

Products are used as construction wood in many different types of constructions and for a variety of different functions such as for example beams, boards or pillars. The products are used within the constructions and are not exposed to the outdoor environment.

**Declared unit**

1 m<sup>3</sup> of average construction wood in various dimensions.

**Issued:**  
17-05-2021

**Valid to:**  
22-04-2025

**Basis of calculation**

This EPD is developed in accordance with the European standards EN 15804 and EN 16485.

**Comparability**

EPDs of construction products may not be comparable if they do not comply with the requirements in EN 15804. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database.

**Validity**

This EPD has been verified in accordance with ISO 14025 and is valid for 5 years from the date of issue.

**Use**

The intended use of an EPD is to communicate scientifically based environmental information for construction products, for the purpose of assessing the environmental performance of buildings.

**EPD type**

- Cradle-to-gate
- Cradle-to-gate with options
- Cradle-to-grave

CEN standard EN 15804 serves as the core PCR
Independent verification of the declaration and data, according to EN ISO 14025

# Product information

## Product description

The main product components are shown in the table below.

Material	Weight-% of declared product
Wood	84 ± 2
Moisture	16 ± 2

Wood from certified sources is used to produce the products.

## Representativity

This declaration, including data collection and the modeled foreground system including results, represents the general production of construction wood products from multiple producers with multiple production sites throughout Sweden, Norway and Finland for sale in Denmark. Resource use and environmental impacts were calculated based on a weighted average taking into account the average import from these countries in the year 2017. Background data are based on published EPD's and on GaBi ts database version 8.7 and are less than 10 years old. Generally, the used background datasets are of high quality, and the majority of the datasets are only a couple of years old.

## Dangerous substances

The construction wood does not contain substances listed in the "Candidate List of Substances of Very High Concern for authorisation"

(<http://echa.europa.eu/candidate-list-table>)

## Essential characteristics (CE)

The products are covered by EN 14081-1+A1:2011.

## Reference Service Life (RSL)

No RSL is declared. This EPD is based on a cradle-to-gate with options assessment and does not include the use stage.

# LCA background

## Declared unit

The LCI and LCIA results in this EPD relates to one cubic meter of general dried and sawn construction wood of varying dimensions.

Name	Value	Unit
Declared unit	1	m <sup>3</sup>
Density	456	kg/m <sup>3</sup>

## PCR

This EPD is developed according to the core rules for the product category of construction products in EN 15804 and the PCR EN16485.

## Flow diagram

## System boundaries

This EPD is based on a cradle-to-gate with options LCA, in which 100 weight-% has been accounted for.

The general rules for the exclusion of inputs and outputs follows the requirements in EN 15804, 6.3.5, where the total of neglected input flows per module shall be a maximum of 5 % of energy usage and mass and 1 % of energy usage and mass for unit processes. In practice no components are excluded.

### Product stage (A1-A3) includes:

- A1 – Extraction and processing of raw materials
- A2 – Transport to the production site
- A3 – Manufacturing processes

The product stage comprises acquisition of nordic wood logs from forestry as well as all other raw materials, products and energy, transport to the production site, packaging and waste processing up to the "end-of-waste"

state or final disposal. The LCA results are declared in aggregated form for the product stage, which means, that the sub-modules A1, A2 and A3 are declared as one module A1-A3.

Production processes include debarking, sawing, drying, sorting, planing and packaging.

**Construction process stage (A4-A5) includes:**

A4 – Transport to the building site:

Construction wood transport to building site			
Type of transport and payload capacity	Capacity utilized incl. return (%)	Distance (km)	Diesel consumption (l/tonkm)
Truck (25t)	61	600	2.2E-2
Ferry (1,500t)	65	170	6.8E-3

**End of life stage (C1-C4) includes:**

C2-C3 – Transportation and waste processing:

End of life includes two different scenarios. One assumes 100% collection with mixed construction waste for incineration of the products with energy recovery. The other scenario assumes 100% separate collection for recycling into particleboards. Neither of these scenarios are likely, but a mix is likely. The exact mix of incineration vs. recycling is unknown. Transport from building site to incineration assumes 100km transport and to recycling assumes a distance of 150km.

There is no disposal in C4.

**Benefits and loads beyond the system boundaries (D) includes:**

For the incineration scenario, module D includes net impacts and benefits from avoided Danish average electricity production and thermal energy recovery.

For the recycling scenario, module D includes net impacts and benefits from avoided production of new residual wood shavings for particleboard production.

## Additional information

### Indoor air

*The EPD does not give information on release of dangerous substances to indoor air because the horizontal standards on measurement of release of regulated dangerous substances from construction products using harmonised test methods according to the provisions of the respective technical committees for European product standards are not available.*

### Soil and water

*The EPD does not give information on release of dangerous substances to soil and water because the horizontal standards on measurement of release of regulated dangerous substances from construction products using harmonised test methods according to the provisions of the respective technical committees for European product standards are not available.*
